ENGLISH ABSTRACT

- (11) Number of the patent document **2115246**
(13) Kind of document **C1**
(14) Document date **1998.07.10**
(19) Publishing country or organization **RU**
(21) Application number registered **97105517/09**
(22) Application filing date **1997.04.07**
(45) Date **1998.07.10**
(516) Edition of IPC6
(51) Main classification **IPCH04J3/17**

Title**METHOD OF TRANSMISSION OF DATA PACKS IN GENERAL- PURPOSE COMMUNICATION CHANNEL AND CONTROL DEVICE**

- (71) Applicant information **Voennaja akademija svjazi**
(72) Inventor information **Kolesnikov V.B.**
(72) Inventor information **Sharov A.N.**
(73) Grantee (asignee) information **Voennaja akademija svjaz**

ABSTRACT:

FIELD: communication, applicable in radio communication networks with pack switching. **SUBSTANCE:** after check-out of condition of general-purpose communication channel data pack priority pulses are

formed at duration $\Delta_{T_{jl}}$, where $l \in \{1, 2, \dots, L\}$, 1 number of data pack priority, L-number of the lowest data pack priority, and j-number of pack radio communication installation, $\Delta_{T_{j1}} > \Delta_{T_{j2}} > \Delta_{T_{jl}}$ and $0 < T_{jl} < T_c$, where T_c -duration of operating cycle of communication channel, at the same time a random pulse with a duration of Δ_{t_c} is generated with equiprobable law of its distribution in time interval $[0, T_c]$, and if condition $\Delta_{t_c} \in [0, T_c]$ is fulfilled, an enabling signal is generated, otherwise the actions in formation of enabling signal are repeated in the next clock of operation of communication channel. **EFFECT:** enhanced capacity of general-purpose communication channel at transmission of data packs with different categories of urgency in conditions of high information load. 4 cl, 14 dwg
